

# Quiz 6

Name: \_\_\_\_\_

1. (1 point) What do I do if I want to make a variable on a class private i.e do not want anyone outside accessing it?
2. (1 point) Variables made private are enforced, but are protected ones enforced? A. Yes B. No
3. (2 points) Getter is a specific kind of class function; what is its use? Why is it needed?
4. (2 points) What is the purpose of the `__init__.py` file?
5. (1 point) Does the python documentation allows you to check specific modules? A. True B. False
6. (3 points) Create a function `get_integer` which will prompt the user to enter in a number and then cast the number to an integer. If the user does not provide in an integer then you should print that that was an invalid option. *Hint: Use a try-except*
